

MID-RANGE ROBUST EDGING SYSTEM

ideal for in-house finishing

RACE THROUGH WORKLOADS
WITH NEKSIA, THE NEXT-
GENERATION KAPPA.

BACK STORY

Speed, precision and ease of use define Neksia, which is offered with or without drilling. Neksia has a full range of finishing functions: tracing, centering, blocking, edging, grooving, safety-beveling and polishing. It can also handle a wide spectrum of premium lenses and frames. Neksia has a user-friendly touch screen, extended frame tracking, and fast and precise lens centering so ECPs can access the setting quickly.

WOW FACTOR

With Neksia, Essilor Instruments combines years of experience in high-performance and precise edging into one of the most user-friendly and productive systems yet. One practice manager said: "Our Neksia has completely changed the way our lab operates. The speed and efficiency has allowed us to double our lab's output. The Essilor team that installed the Neksia was second to none. They had the unit installed and had us completely trained in just a few hours. This speaks to the knowledge of the sales manager and also to the ease of the Neksia system." ■

DETAILS

Neksia, from Essilor Instruments, is built on a reliable and durable platform that combines a high-performance edger and frame-tracing system with a computer-assisted centering and blocking device. Together, they work seamlessly to optimize workflow. Neksia is an

ideal edger for in-house finishing. ECPs who install the Neksia finishing product will soon realize a quick and sizeable return on their investment. They can now replace patients' lenses and frames at a faster rate and in doing so, ramp up patient satisfaction.
